	<p>2.2 课程简介-英文 Brief Introduction of the Course(300-2000 words)</p> <p>Entitled “The Interdependence of Theory, Practice, and Criticism in Architecture,” this course is open to graduate students. Using an integrated model for teaching architectural design theory and practice, this course offers a close-reading of selected contemporary practices of varying sizes and categories and frames each within related subjects of relevance aiming to gain a deeper understanding of the intimate relationship between critical theory and architectural production.</p> <p>Weekly lectures from one practice will focus on two scales of exploration: 1. The practice’s overall architectural vision/manifesto and factors that influence their</p>			

	<p>design conceptions, theoretical foundations, including personal history, cultural background, academic lineage, etc. 2. One case study project showing examples of how theory and built work integrate. Particular emphasis will be given to engage subjects of relevance with theoretical applications such as social/political/cultural history and theory, construction and fabrication technology, materiality exploration, design process and methodology, and visual and textual representations and so on.</p> <p>Enrolled students are required to participate in weekly lectures, and choose one of the practices as the subject of the case study of their papers. Papers are required to be written in English, no less than 4,000 English words. One midterm review and one final review will be given by the instructors to give feedbacks to paper writing.</p>
